

# RECYCLING

## RECYCLING!

Recycling is the process of converting waste materials into new materials and objects. The Recycling saves materials, reduces the need to landfill and incinerate, cuts down pollution, and helps to make the environment more attractive. It also creates jobs, because Recycling things takes a bit more effort than making new things. Recycling doesn't just save materials: Also saves energy too!

## ANIMAL SUFFERING!

How many animals die each year from plastic?

100 million marine animals die each year from plastic waste alone. On the other hand, 100,000 marine animals die from getting entangled in plastic yearly - this is just the creatures we find! 1 in 3 marine mammal species got found entangled in litter, 12-14,000 tons of plastic are ingested by North Pacific fish yearly.

## FUN FACTS!

The energy saved from Recycling one Glass Bottle can power a 100-watt Light Bulb for up to 4 hours.
